

# How to make your garbage can more bear-resistant:

## Materials needed:

- 2 or 3—4 1/2" double-hinged safety hasps with hardware (replace screws with appropriate sized bolts, locking nuts & washers)
- 2 or 3 clips, quick snaps or carabiners
- An electric drill with drill bits
- Wrenches
- Chain, wire or string

Depending on the type of can, hasps may be attached either in the front or sides. If possible it is best to attach hasps on the front and sides. As shown in the photo.

Use drill to make pilot holes to attach hasp and latch plate to bottom lip and lid of can. The clips, quick snaps or carabiners may be attached as shown. This helps to avoid loss or misplacement. To lock can, place clip through latch plate after hasp is in place.

Material may be found at any hardware store.
